

Paper Code: HM-HU802

Paper Name: PROFESSIONAL ETHICS AND PROJECT MANAGEMENT

- I. Which of the following terms refers to principles or rules of conduct governing individuals or groups?
 - a. Morals
 - b. Values
 - c. Ethics
 - d. All of the above

- II. Engineering Ethics primarily deals with:
 - a. Theoretical concepts in engineering
 - b. Ethical standards and dilemmas within engineering practice
 - c. Engineering techniques and methodologies
 - d. None of the above

- III. What is the purpose of a Code of Ethics in a professional setting?
 - a. To outline laws and regulations
 - b. To provide guidelines for ethical behavior
 - c. To promote competition among professionals
 - d. To limit professional development

- IV. Which of the following is not a model of professional roles?
 - a. Technical Model
 - b. Business Model
 - c. Corporate Model
 - d. Societal Model

- V. Theories about right action aim to:
 - a. Define what actions are morally right or wrong
 - b. Analyze engineering practices
 - c. Promote individual interests over the collective good
 - d. None of the above

- VI. Managing conflict in professional settings involves:
 - a. Ignoring conflicts to maintain harmony
 - b. Suppressing differing opinions
 - c. Resolving disputes in a constructive manner
 - d. Blaming others for conflicts

- VII. Whistleblowing is:
 - a. Reporting unethical or illegal behavior within an organization
 - b. Encouraging unethical behavior for personal gain
 - c. Ignoring ethical violations for job security
 - d. None of the above

- VIII. Global Ethical Issues in engineering encompass:

- a. Local regulations and norms
- b. Ethical considerations in international projects
- c. Personal beliefs of engineers
- d. None of the above

IX. Environmental Ethics is concerned with:

- a. Balancing economic growth with environmental preservation
- b. Ignoring environmental concerns for profit
- c. Exploiting natural resources without consequences
- d. None of the above

X. Business Ethics primarily focuses on:

- a. Maximizing profits at any cost
- b. Ethical standards in business practices
- c. Avoiding legal regulations
- d. None of the above

XI. Computer Ethics involves:

- a. Ensuring fair use of computer resources
- b. Hacking into computer systems for personal gain
- c. Ignoring cyber threats
- d. None of the above

XII. Engineers as Managers are responsible for:

- a. Technical aspects only
- b. Leading and managing teams effectively
- c. Avoiding leadership roles
- d. None of the above

XIII. Consulting Engineers provide expertise in:

- a. Legal matters only
- b. A specific field of engineering
- c. Ignoring client requirements
- d. None of the above

XIV. Engineers as Expert Witnesses and Advisors primarily assist in:

- a. Legal proceedings
- b. Business negotiations
- c. Administrative tasks
- d. None of the above

XV. Moral leadership involves:

- a. Following ethical standards blindly
- b. Inspiring others to act ethically
- c. Exploiting power for personal gain
- d. None of the above

- XVI. What is the definition of a project?
- A temporary endeavor with a defined beginning and end
 - A permanent ongoing task
 - A random collection of activities
 - None of the above
- XVII. Which phase of the Project Life Cycle involves defining the project's objectives?
- Initiation / Conceptualization Phase
 - Planning Phase
 - Implementation / Execution Phase
 - Closure / Termination Phase
- XVIII. What is the importance of Project Planning?
- It helps in estimating project costs
 - It ensures clarity in project objectives
 - It prevents project delays
 - All of the above
- XIX. What is a Gantt chart used for in Project Management?
- Resource allocation
 - Identifying the critical path
 - Scheduling activities over time
 - None of the above
- XX. CPM and PERT Analysis are used for:
- Quality control
 - Risk management
 - Scheduling and project control
 - None of the above
- XXI. What is the significance of identifying the Critical Path in project scheduling?
- It helps in crashing the project schedule
 - It indicates the shortest time to complete the project
 - It identifies activities that cannot be delayed without delaying the project
 - None of the above
- XXII. Time Cost Trade-off Analysis involves:
- Balancing project duration and resource costs
 - Ignoring project timelines
 - Maximizing project duration
 - None of the above
- XXIII. What is the role of a Project Manager in Project Monitoring and Control?
- Ensuring project success without overseeing progress
 - Directing project activities and resources
 - Avoiding project risks
 - None of the above

- XXIV. MIS in Project Monitoring stands for:
- Management Information System
 - Monitoring Information System
 - Managing Information Software
 - None of the above
- XXV. Feasibility Studies in Project Management assess:
- The technical feasibility of the project
 - The economic viability of the project
 - The social impact of the project
 - All of the above
- XXVI. What is the purpose of a Detailed Project Report (DPR)?
- To provide an overview of the project's progress
 - To assess the feasibility of the project
 - To record project expenses
 - None of the above
- XXVII. What does WBS stand for in Project Planning?
- Work Breakdown Structure
 - Work Budget Schedule
 - Work Breakdown Schedule
 - None of the above
- XXVIII. Phased Project Planning involves:
- Completing all project tasks simultaneously
 - Dividing the project into smaller phases
 - Ignoring project timelines
 - None of the above
- XXIX. What is a Project Audit?
- A review of project expenses
 - An examination of project performance and processes
 - An assessment of project risks
 - None of the above
- XXX. Which tool is commonly used for hands-on training in Project Management?
- MS Word
 - MS Excel
 - MS Project
 - None of the above
- XXXI. The primary focus of ethics is on:
- Legal obligations
 - Personal values
 - Right and wrong behavior

d. Technological advancements

- XXXII. Engineering ethics primarily deal with:
- Design and manufacturing processes
 - Ethical dilemmas within engineering practice
 - Business strategies
 - Financial management
- XXXIII. A Code of Ethics in a profession:
- Is legally binding
 - Provides guidelines for professional conduct
 - Is optional for professionals
 - None of the above
- XXXIV. The role of whistleblowing in organizations is to:
- Encourage unethical behavior
 - Suppress ethical concerns
 - Report unethical behavior
 - None of the above
- XXXV. Global ethical issues in engineering include:
- Environmental sustainability
 - Local regulations only
 - Personal beliefs of engineers
 - None of the above
- XXXVI. Environmental ethics primarily focus on:
- Maximizing profit
 - Ignoring environmental concerns
 - Balancing human activities with environmental preservation
 - None of the above
- XXXVII. What do consulting engineers primarily provide?
- Legal advice
 - Expertise in a specific field of engineering
 - Marketing strategies
 - None of the above
- XXXVIII. Engineers as expert witnesses and advisors primarily assist in:
- Legal proceedings
 - Administrative tasks
 - Business negotiations
 - None of the above
- XXXIX. What is the role of a project manager in project management?
- Technical tasks only

- b. Leading and managing project teams
- c. Administrative duties
- d. None of the above

- XL. What is the significance of identifying the critical path in project scheduling?
- a. It indicates the shortest time to complete the project
 - b. It identifies activities that cannot be delayed without delaying the project
 - c. It helps in resource allocation
 - d. None of the above

- XLI. CPM and PERT are tools used for:
- a. Risk management
 - b. Project scheduling
 - c. Budgeting
 - d. None of the above

- XLII. What is the purpose of feasibility studies in project management?
- a. To assess the technical feasibility of the project
 - b. To evaluate the economic viability of the project
 - c. To identify potential risks
 - d. All of the above

- XLIII. What does WBS stand for in project management?
- a. Work Budget Schedule
 - b. Work Breakdown Structure
 - c. Work Breakdown Schedule
 - d. None of the above

- XLIV. Phased project planning involves:
- a. Completing all project tasks simultaneously
 - b. Dividing the project into smaller phases
 - c. Ignoring project timelines
 - d. None of the above

- XLV. What is project audit?
- a. An examination of project performance and processes
 - b. A review of project expenses
 - c. An assessment of project risks
 - d. None of the above

- XLVI. Which tool is commonly used for hands-on training in project management?
- a. MS Word
 - b. MS Excel
 - c. MS Project
 - d. None of the above

XLVII. What is the primary focus of morals?

- a. Legal obligations
- b. Personal values
- c. Professional conduct
- d. None of the above

XLVIII. Engineering ethics primarily deals with:

- a. Technical specifications
- b. Ethical dilemmas within engineering practice
- c. Financial management
- d. None of the above

XLIX. The purpose of a code of ethics in a profession is to:

- a. Provide guidelines for professional conduct
- b. Legal regulations
- c. Encourage competition
- d. None of the above

L. What is the role of whistleblowing in organizations?

- a. To encourage unethical behavior
- b. To suppress ethical concerns
- c. To report unethical behavior
- d. None of the above

- 1 Explain the concepts of morals, values, and ethics. How do they differ and intersect?
- 2 Discuss the significance of engineering ethics and professionalism in the field of engineering.
- 3 Describe the importance of a code of ethics in professional practice. Provide examples of codes of ethics from different professions.
- 4 Compare and contrast different models of professional roles in engineering.
- 5 Discuss various theories about right action and their relevance in ethical decision-making.
- 6 Define engineering ethics.
- 7 Give an example of a code of ethics used in a specific profession.
- 8 What are the common sources of conflict in engineering projects? How can conflicts be effectively managed?
- 9 Explain the concept of whistleblowing and its ethical implications in the context of engineering.
- 10 Explain the concept of whistleblowing.
- 11 Discuss one global ethical issue faced by multinational corporations.
- 12 Analyze global ethical issues faced by multinational corporations, with a focus on environmental ethics and business ethics.
- 13 Evaluate the role of engineers in technological development and their ethical responsibilities.
- 14 Discuss the challenges and responsibilities associated with engineers serving as managers, consulting engineers, and expert witnesses/advisors.
- 15 Explain the concept of moral leadership and its significance in engineering practice.
- 16 Describe the importance of moral leadership in engineering practice.
- 17 Discuss the importance of engineering ethics in the context of project management. Provide examples illustrating ethical dilemmas engineers might face in project execution.
- 18 Analyze the role of engineers in addressing global ethical issues such as climate change and sustainable development. Provide case studies illustrating effective engineering solutions with numerical data on their environmental impact.
- 19 Critically assess the role of moral leadership in engineering projects. Explain how ethical leadership can impact project outcomes and team dynamics.
- 20 Critically assess the role of whistleblowing in addressing ethical violations in engineering projects.

- 21 Define project management and discuss its importance in various industries.
- 22 Identify and discuss the issues and problems commonly encountered in project management.
- 23 Describe the phases of the project life cycle and explain the activities involved in each phase.
- 24 Define project management.
- 25 Discuss the importance of feasibility studies in project management.
- 26 Explain the process of preparing a detailed project report and discuss the various appraisals involved.
- 27 Discuss the importance of project planning and outline the steps involved in project planning.
- 28 Explain the concepts of Work Breakdown Structure (WBS) and Organization Breakdown Structure (OBS) in project planning.
- 29 Define Work Breakdown Structure (WBS).
- 30 What is the significance of social cost-benefit analysis in project feasibility studies?
- 31 Explain the stages involved in project life cycle management. Discuss the ethical considerations that should be addressed at each stage, providing examples.
- 32 Discuss the ethical implications of cost-benefit analysis in project feasibility studies. Explain how economic considerations can influence project decisions.
Compare and contrast CPM, and PERT analysis in project scheduling and costing. What is the critical path in project management?
- 33 Discuss the significance of project monitoring and control. Describe the role of a project manager and the use of Management Information Systems (MIS) in project monitoring.
- 34 Explain the purpose of a feasibility study.
- 35 Differentiate between Gantt chart and PERT analysis.
- 36 How does time-cost trade-off analysis aid in project scheduling and costing?
- 37 A construction project has the following activities and their estimated durations (in weeks):

Activity	Immediate Predecessor	Duration(days)
A	-	5
B	-	4
C	A	7
D	B	7
E	B	8
F	B	5
G	C,D	8
H	E,I	11
I	F	2
J	F	12
K	H,J	11

- I. Draw the network diagram
- II. Find the critical path by computation of slack time
- 40 Explain the concept of time-cost trade-off analysis in project scheduling. Discuss how adjusting project timelines can affect costs and project completion.
- 41 What is the role of a project manager in project monitoring and control?
- 42 Explain the role of engineers as managers in project management.
- 43 Describe the use of Management Information Systems (MIS) in project monitoring.
- 44 Evaluate the ethical responsibilities of engineers in multinational corporations, considering factors such as labor practices, environmental impact, and community engagement.
- 45 Discuss the ethical considerations associated with resource allocation in project management. Provide examples demonstrating how ethical decisions impact resource distribution.
- 46 Analyze the role of project audits in ensuring ethical project management practices. Include numerical metrics for assessing project performance and compliance with ethical standards.
- 47 Evaluate the ethical implications of outsourcing in project management. Provide data comparing the cost savings versus potential impacts on quality and labor practices.
- 48 Discuss the ethical responsibilities of engineers in ensuring workplace safety on project sites. Provide examples of safety measures and their impact on project budgets and schedules.
- 49 Explain the concept of project scope creep and its ethical implications.

50 Discuss the ethical considerations associated with the use of advanced technologies such as artificial intelligence and drones in project management. Include numerical examples of potential risks and benefits.
